Principal Investigator: The Impact of Offshoring and Outsourcing Firm Behaviors on Labor Market Outcomes

FSRDC Census Project hosted at Georgetown's Massive Data Institute

This project proposes to answer the following questions: What role do supply chains play in shaping wage inequality? How do these supply chains vary by firm productivity levels, and is there a systematic differential response of these supply chains to an international trade shock? If wages are determined by supply chains, this implies that there will be nominal wage consequences for workers in all sectors of the importing economy. How much do changes, due to trade shocks, in firm-level supply-chains spillover into non-import competing sectors? Within all sectors are there heterogeneous responses to trade shocks that vary by firm size and what are the implications of this heterogeneity?
